Our Mission Vision Statement

To discover, develop and commercialise pioneering technologies and solutions to make lives better in an ever-changing world

Discover Develop Commercialise

Renew Health Limited (Renew Health), the multi award winning, connected health medtech company was established in 2014 in Ireland by founders who have a vision to discover, develop and commercialise pioneering technologies and solutions to make lives better. A fast-growing International company, with Global Headquarters in Singapore, our European Headquarters in Athlone, Ireland, manages key brands across its Cardiac Connected Health, Oral Health and Pharma divisions. The business also has sales and marketing teams working from the UK, Ireland, Germany and the Netherlands.

Renew Health is committed to delivering exciting medical technologies to patients and to communities worldwide.

Renew Health has an exciting portfolio of health products at various stages of development. Our commercial portfolio includes a number of award winning products that are launched across Europe and the US.

The simple solution to quickly and effectively detect patient arrhythmias.

The world's first 3 lead 14 day continuous ECG and remote event device.

The Zensor™ device is the world's first three lead, 14 day continuous ECG and remote event device available on the market. This small yet powerful system enables the transmission of comprehensive ECG data to allow you to diagnose patient arrhythmias including Atrial Fibrillation. Cleared for use by the US FDA and CE marked, the Zensor device is a Wi-Fi enabled patient monitor that captures the electrical rhythm and the rate of your patient's heart for up to 14 days.

Key Features

- ✓ 3 lead Wi-Fi enabled ECG monitoring system.
- ✓ Up to 14 day continuous beat by beat data capture and recording.
- ✓ Event transmission and near real time recording in one device.
- ✓ High quality data capture through use of proprietary motion artefact reducing electrodes.
- ✓ Patient activated event recording feature.

Key Client Benefits

Easy patient set up and incorporation into your practice.

True remote AF monitoring and analysis.

Event transmission option for daily reports if requested.

Private and secure with only authorised access.

User friendly PDF format report generated for easy review.

Key Patient Benefits

User friendly.

Comfortable compact device with minimal impact on patient lifestyle.

Event button so your patient can record when they 'feel' an event.

Patient data private and secure.

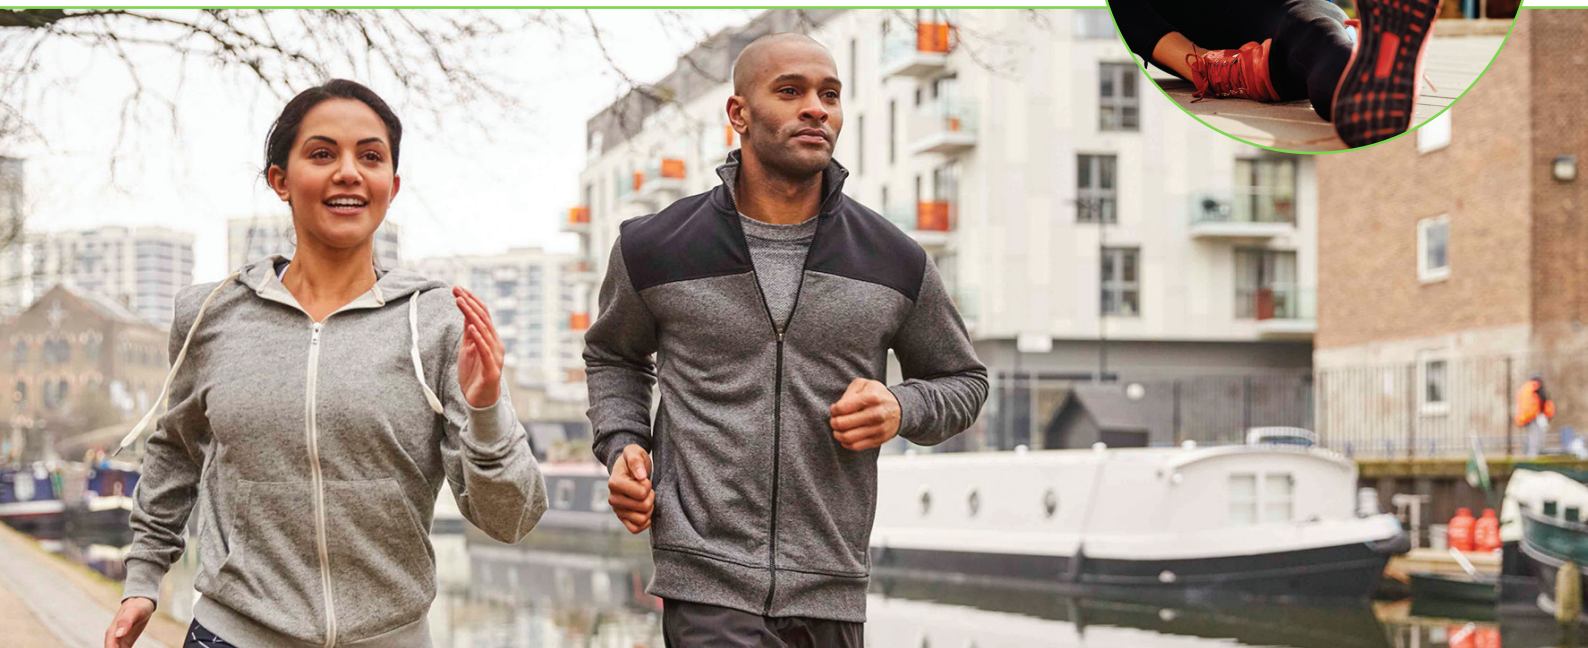

Better Circulation. Better Health.
**Renew Therapy provides everyone with
the opportunity to boost their health.**

The next generation in External Counter Pulsation Therapy.

Renew® ECP Therapy is a non-invasive, ECG-gated compression therapy clinically proven to boost blood circulation, endothelial function and angiogenesis.

Renew ECP Therapy has been shown to increase exercise tolerance and vitality levels in people who have been affected by chronic heart disease and for those suffering from angina, a dramatic reduction in their associated angina pain.

Cleared for use by the US FDA and CE marked, Renew ECP Therapy devices are designed to provide solutions to the medical, sports performance and health prevention markets.

Key Features

- ✓ **All-in-one System** comprises of a compact treatment bed, laptop with preloaded software, Plethysmometer and ECG equipment.
- ✓ **Programmed to deliver** up to 6psi of pressure for optimal results.

- ✓ **Software uses the ECG-** input to trigger precision cuff inflation and deflation.

- ✓ **Unit folds to compact,** portable size making it easy to move between treatment areas.

Key Client Benefits

Expand existing client services with the latest technology.

Fast and efficient installation.

Flexible payment solutions.

Full face-to-face and online training.

Low running costs.

Dedicated customer service.

Key Patient Benefits

Non-invasive, safe and comfortable treatment.

Over 80% of refractory angina patients experience health benefits.

Reduction in angina pain encouraging a more active lifestyle.

Benefits can last up to 3 years.

Helping people to protect their long-term health, boost vitality and improve physical wellbeing.

Medical Imaging and Data Management - Simplified.

A vendor-agnostic, web-based PACS solution that seamlessly integrates imaging and reporting workflows.

UltraLinq™ Healthcare Solutions, is a compliant, secure clinical platform for iterative collaboration, reporting, second opinions and referrals. As a vendor-neutral solution, UltraLinq can be integrated with most imaging platforms. It has been proven to be a cost-effective, hardware-free solution, which provides an impressive eight year storage with free software upgrades.

UltraLinq has been developed for use at public and private health groups and is UK NHS Supply Chain Framework compliant.

Key Features

- ✓ All ultrasound modalities supported.
- ✓ Facilitate remote interpretation for all exam types.
- ✓ Extensive reporting library including professional body standard templates.
- ✓ Calibrated post-measurement and annotation tools.
- ✓ Comprehensive vascular ultrasound support.
- ✓ Flexible workflow to support cardiovascular specialists in all environments.
- ✓ Full audit capabilities.

Key Client Benefits

Improved patient care.

Improved efficiency for reporting and reviewing results in a clinical setting.

Anytime, anywhere access allows full coordination across multiple locations and specialities.

Reduced costs through UltraLinq's pay-per-exam model combined with unlimited storage and support.

Key Patient Benefits

Quicker exam result turn-around to allow for timely treatment.

Centralised location for all patient imaging exams.

Multi location access to diagnostic information.

An innovative and effective treatment for symptoms associated with Temporomandibular Disorders (TMD) such as jaw pain, facial pain and tension headaches.

A safe, effective, customised treatment that can relieve the pain and associated symptoms of TMD.

The Cerezen™ devices are a pioneering medical innovation that effectively treats jaw pain, facial pain and tension headaches associated with TMD. Clinically effective, and custom made to fit the ear, Cerezen devices can be worn day or night.

The two custom-made, 3D printed hollow inserts sit comfortably in each ear canal; the nearest access point to the temporomandibular joint.

Key Features

- ✓ Clinically effective, comfortable, discreet and easily inserted and removed, the devices can be worn day or night, meaning patients are more likely to 'use as directed' in comparison with traditional TMD treatments such as bite splints.
- ✓ Two 3D printed, custom-made, hollow auditory canal inserts allow full passage of sound through the ear and are practically invisible from the outside.
- ✓ The device is non-invasive with minimal negative impact on your patient's lifestyles.

Key Client Benefits

Clinically proven to treat key symptoms of TMD.

Non-invasive, safe, effective, reversible therapy.

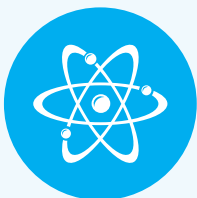

Easy to implement into your practice.

CE marked and US FDA cleared.

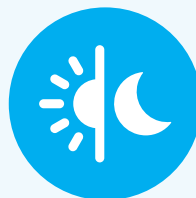

Key Patient Benefits

Most advanced, effective treatment for TMD.

Non-invasive, high compliance therapy.

Can be worn day and night.

No adverse effect on speech, hearing or eating.

Customised, cost effective therapy.
